1) The armature/field supply voltage can be less than the rated supply voltage armature/field (set with Parameter P078; for converters with 400 V rated voltage, input voltages of up to 85 V are permissible). The output voltage is reduced accordingly. The specified output DC voltage can be guaranteed up to undervoltages 5 % below the supply voltage (rated supply voltage armature/field).

2) Values apply to output rated DC current.

3) Load factor K1 (DC current) as a function of the coolant temperature (see P077 Operating Instructions, Section 11).

K1 > 1 only permissible where $K1 * K2 \leq 1$.
overall reduction factor $K = K1 * K2$
(for K2 see Footnote 4).

a) In spite of derating, converters of $\geq 400 \text{ A}$ with enhanced cooling may be operated at an ambient or coolant temperature of 50 °C only if the rated supply voltage of the converter fan is safely within the limited tolerance range of 400 V +10% -15%.

b) Not permissible when T400 or OP1S are used.

4) Load values K2 as a function of installation altitude (see P077 Operating Instructions, Section 11); overall reduction factor $K = K1 * K2$ (for K1 see Footnote 3).

altitude m	1.0	0.835	0.74	0.71	0.67

The supply voltages for all electric circuits apply for site altitudes up to 5000 m for basic insulation, with the exception of converters for 830 V rated supply voltage:
up to 4000 m 830 V
up to 4500 m 795 V
up to 5000 m 727 V

5) See Section 5.

6) 2-ph. AC 460 (+15% / -20%) is also permissible.

7) Operation in the extended frequency range of 23 Hz to 110 Hz is possible on request.
